Education

Stanford University U.S.A.

PhD in Machine Learning Sep. 2020 - present

· Honours: Knight-Hennessy Scholar

University of Cambridge, Trinity College

Oct. 2018 - Aug. 2019

Sep. 2014 - May. 2017

MPhil in Machine Learning and Machine Intelligence

· Grade: Distinction

• Honours: Department of Engineering Full Scholarship

École Polytechnique Fédérale de Lausanne (EPFL)

Switzerland

U.K.

BSc in Biomedical Engineering

• Grade: 5.75 out of 6

• Honours: Best bachelor grades of the faculty

• Exchange: University of British Columbia, Canada (Sep. 2016 - May 2017). Grade: 93% (A+).

Work Experience

Vector Institute Canada

Researcher Nov. 2020 - Aug. 2021

• What: I led a research project on compression with respect to ML algorithms.

• Why: Most data is processed by algorithms yet standard compressors are optimized for human perception.

Facebook Al Research U.S.A.

Al Resident Sep. 2019 - Sep. 2020

• What: I led a research project proposing representations for machine learning (ML) that are provably optimal. [1]

• Why: By using our optimal representations one could (theoretically) use ML in settings with very little data available.

The University of Amsterdam

Netherlands

Researcher May 2018 - Oct. 2018

• What: I led a research project proposing a way to improve natural language processing in the extrapolation setting. [3]

• Why: ML fails when the task is too different from the train set (extrapolation), which hinders its applicability in the real world.

Grab Singapore

Data Scientist Oct 2017 - Apr. 2018

- What: I was in charge of classifying reviews from 40 million users in languages including Thai, Vietnamese, Bahasa, Burmese, Thai, Khmer.
- Why: Grab is Asia Pacific's largest startup. As Southeast Asian languages are under-researched most ML methods under-perform on them.

Sensible Building Science (SBS) and University of British Columbia

Canada

Applied Research Assistant

May 2017 - Oct. 2017

Feb. 2016 - Sep. 2016

- What: I developed a method to predict room occupancy given the past and current number of devices connected to WiFi hotspots.
- Why: SBS is a start-up that decreases the energy consumption of large buildings (e.g. airports and universities) by using smart heating.

Swiss Institute of Bioinformatics

Switzerland

Research Assistant

- What: I developed a ranking algorithm used to analyze mutations of 183 infants suffering from Sepsis.
- Why: Sepsis is the world deadliest condition (11 million deaths/year, mostly in developing countries).

Miscellaneous

Languages French (native); Polish (native); English (C2); German (B2); Italian (B2).

Leadership Founder and president of an association uniting students from Lausanne; Silicon Valley Startup Camp for Swiss entrepreneurs.

Sports Lausanne's Marathon (4th junior); volleyball (Cambridge Univeristy team); PADI rescue scuba diver; bouldering; skiing.

Teaching Teaching Assistant at EPFL for Real Analysis, Multivariate Analysis, Biology. More than 300 students in total.

Writing Neural Process Family (yanndubs.github.io/Neural-Process-Family); ML Glossary (yanndubs.github.io).

Open Source Winner of the NIPS 2017 Implementation Challenge (github.com/YannDubs/Hash-Embeddings).

Invited Talks "Learning Optimal Representation", Courant Institute, New York University, 12 Oct. 2020.

 $\hbox{``Learning Optimal Representation'', Department of Statistical Sciences, University of Toronto, 14\,Oct.\,2020.}$
